

SiPER

In-House Secure Communication Platform

A close-up photograph of a person's hands holding a glowing fiber optic cable. The hands are positioned in the lower half of the frame, with the fingers gripping the cable. The cable itself is a thin, translucent strand that glows with a bright orange-red light, extending from the hands towards the upper right corner. The background is a soft, out-of-focus bokeh of various colors, including blues, greens, and yellows, suggesting an indoor setting with ambient lighting. The overall mood is one of precision and technological safety.

ALL YOUR
COMMUNICATIONS
ARE NOW SAFE

From now on, there is an application that is much more advanced and user-friendly than existing communication applications:

SiPER

Moreover, it is indispensable for all institutions and companies with its secure structure and archiving privilege...

IS SIPER SAFE?

In public communication applications, you are not in control, it is in others.

SİPER protects all your communications like a castle, because you manage your communication with SİPER.

SİPER users are defined and logged into the system in a special way. Each message is encrypted end-to-end while a private key is generated for the identity. Special encryption methods are used instead of security layers such as SSL and Firewall, and the firewall is reshaped with each message. SİPER is not just a messaging software, it also performs the task of attack detection and prevention as a layer. Its purpose is not only to encrypt it, but also to keep the server within the security circle.

SÍPER is an application that allows highly secure messaging and conversations with the developed encrypted messaging methods, and is also very suitable for customization with its flexible structure and flexible Back-Ends infrastructure that can be integrated into institutions and any enterprises.

With customized solutions, a structure has been developed that allows messages to be archived if necessary, enables the synchronous use of more than one device at the same time, and provides services to users on every platform with iOS, Android, Windows, Linux and Mac OS X platforms.

In summary, SÍPER is one step ahead of its competitors among instant messaging applications with its high-level security; its ability to be installed on your own servers, to work from the corporate active directory, different business-specific features and its development/ customization flexibility.

WHO IS AÇIK DENİZ?

Açık Deniz Informatics Consultancy Corporation; It was established in Uşak in 2008 and announced its name in 2011 with the “Turkish Messenger” application. The company, which went through a restructuring in 2013, was included in the Akçay Group of Companies.

Açık Deniz Inc., which has started to carry out R&D activities in Istanbul since 2013; It has implemented mobile project applications such as Turkcell Fizy, Hürriyet E-Newspaper, Insurance Information Center (SBM), which are used extensively in Turkey.

Açık Deniz Inc. has the “ISO-27001 Certificate”, which certifies compliance with international information security management system standards.

Since 2015, it has started to develop an in-house Encrypted Mobile Communication application called SİPER. Completing the developments in 2018, it is successfully passed the security and penetration (leakage) tests of the product carried out by the UITSEC Test company.

Açık Deniz Inc. has developed a product called AMBAR DEPO which is a secure file archiving and sharing system, in 2018. Thanks to this product, all files shared internally and externally from SİPER and other applications can be secured.

In addition, thanks to the product called AKSİYON, which is the internal collaboration software of Açık Deniz Inc.; A management system has been developed for both SİPER and AMBAR, and a product has been developed where all the works and services of the institution can be managed.

Açık Deniz Inc. still continues to work on attack detection and prevention with artificial intelligence software.

Açık Deniz Inc. and Havelsan Inc. signed a Business Partnership Agreement in 2018. Company is a member of SaSaD, Turkey Cyber Security Cluster and Turkish Information Security Association.
